

CERTIFICATE OF COMPLETION

WARSAW UNIVERSITY OF TECHNOLOGY

member university of the ENHANCE Alliance

certifies that Harshit Verma

born on 25.03.1999

has successfully completed **ENHANCE Students Against Climate Change
Summer School 2023**

as part of the ENHANCE learning offers

Digitally signed by Professor Jan Słyk
Vice-Rector for Academic Affairs
Warsaw University of Technology

Warsaw, 20.07.2023

CERTIFICATE SUPPLEMENT

Participant

First and last name	Harshit Verma
Date of birth	25.03.1999
Place of birth	Delhi, India

Learning Activity

Course name	ENHANCE Students Against Climate Change Summer School 2023
Time Frame	4th July 2023 – 19th July 2023
ECTS awarded	4 credits
EQF Level	7
Number of work hours:	102 hours – preparatory homework 25h, lectures 6h, online workshop 6h, on-campus workshop 40h, online teamwork 25h

Form of participation in learning activity: blended course

The Summer School consisted of three blocks (two online and one on-site in Warsaw). Participation required prior preparation, including reading the materials provided by tutors and preparing a self-presentation (following the instructions provided). As the final result of the Summer School, students made a film documenting their project results.

Tutors:

Katarzyna Bargieł, Anna Cudny, Artur Jerzy Filip, Mariusz Kaleta, Anna Rolewicz-Kalińska

CERTIFICATE SUPPLEMENT

► BLOCK 1 (37 hours) – self-work + online

When: 4th-5th July 2023

Where: online, Webex

Learning activities: preparatory homework (25h) + lectures (6h) + workshops (6h)

Keynote speakers: Magdalena Jaśkiewicz, Iwona Wagner

Scope: introduction to the topic, introduction to the methodology of work and discussion of tasks

The first two days of online meetings were devoted to getting to know each other by students and tutors (workshops, self-presentations). In addition, students were introduced to the basic knowledge of climate change and its complexity in the context of the functioning of the local systems.

► BLOCK 2 (40 hours) – on-site workshop & teamwork in Warsaw

When: 10th-14th July 2023

Where: Warsaw University of Technology (WUT) campus

Learning activities: internal work in teams, self-work, consultations with the WUT team

Scope: problem space exploration, evaluating ideas – prototyping, testing & analysing, creating an action plan for delivery

During the on-site part, students were working in international teams on the climate change problem perceived from the ENHANCE community's perspective. Each team developed a different problem area. The team deepened their substantive knowledge within the selected problem area and proposed and prototyped their solutions. Working in teams was supervised and supported by tutors. Additionally, mini-lectures introducing students to the techniques of solving complex project problems were organised.

► BLOCK 3 (25 hours) – online teamwork

When: 18th-19th July 2023

Where: online, MS Teams

Learning activities: internal work in teams, self-work, online consultations with the WUT team

Scope: teams self-work on final deliverables

In this part, students finished the design task and prepared their final version of a film. The tutors supported the teams in the process of preparing the final version of the project results.

CERTIFICATE SUPPLEMENT

Learning outcomes

Student has an advanced knowledge and a critical understanding of:

- latest technology solutions with regard to climate issues
- the importance and complexity of climate change issues
- basic ideas and theoretical concepts regarding climate change research
- how local actions influence long-term global changes

Student is able to apply advanced knowledge to:

- identify the aspects influencing climate change in the local environment (city, campus, housing estate)
- recognise the potential and the role of academic communities

Student is able to:

- integrate ideas into solutions and propose an action plan in selected fields of climate change
- analyse and decompose challenges in selected fields of climate change
- solve identified problems in teams based on the knowledge and skills of team participants
- understand and be sensitive to citizen-led attempts at climate issues

Assessment of learning outcomes

Acquisition of knowledge and skills was implemented through the use of the following techniques:

- direct contact and transfer of knowledge by the tutor
- site-specific research
- product-oriented work
- group work and exchange of thoughts
- presentations and public discussions

Assessment methods: group and public presentations, discussions, engagement and project responsibility, individual (partial) project tasks.
